### What is insurance processing history information?

Data exists only when the insured or the perpetrator chooses insurance processing, so the presence or absence of insurance processing history does not necessarily mean the presence or absence of an accident. Even if there is a repair amount processed in the insurance processing history, the underestimation of the amount does not necessarily match the presence or absence of an accident and the result of the determination. If there is insurance processing history information, refer to the relevant information, check the performance/condition check record and Encar diagnosis evaluation results together, and then comprehensively determine whether the vehicle has had an accident and the repair status. It is a reasonable way to select a used car.
